EDUCATION

Manipal Institute of Technology, Manipal
B.Tech in Electronics and Instrumentation

CGPA: 8.37
Oct, 2020 – Nov, 2024

Maharishi Vidya Mandir, Silpukhuri
CBSE, Class XII

Percentage: 89%
Apr, 2018 – May, 2019

EXPERIENCE

Data Analytics Intern
Robert Bosch

Feb, 2024 – Jun, 2024
Bengaluru, India

- Analyzed large datasets from automotive systems and ECUs, identifying data irregularities caused by **sensor noise** and providing actionable insights for improving data accuracy and system performance.
- Collaborated with cross-functional teams to extract meaningful insights from system data, contributing to enhanced **decision-making** processes for software optimizations.
- Performed data cleaning and pre processing on **CAN signal data (handling 1000+ signals)** to ensure **99%** data accuracy for analysis, which improved the reliability of downstream decision-making processes.

Undergraduate Research Intern
IIT, Guwahati

June, 2022 – July, 2022
Guwahati, India

- Performed analysis of power radiation parameters for **8 antenna models** using MATLAB and Excel, deriving actionable insights that led to the selection of an optimal combination of horn and concave antenna designs.
- Developed a data-driven evaluation framework to compare antenna configurations, enhancing decision-making in the selection process by **30%**.
- Selected and Implemented the best configuration, which was later fabricated and Tested through **3D printing** of the antenna, validating the design in an anechoic chamber.

PROJECTS

UBER Ride Data Analysis and Visualization | SQL, PostgreSQL, MS Excel, Power BI

- Developed a Power BI dashboard to analyze UBER ride data, focusing on ride trends, customer behavior, and payment methods, enabling actionable insights and improving data accessibility.
- Utilized SQL to clean and **pre-process 100K+ rows** of ride data, ensuring **98%** accuracy for analysis and answering **10+** business queries, such as retrieving successful bookings and identifying top customers.
- Designed and visualized dashboards in Power BI, including **ride volume trends, booking status breakdowns, and revenue by payment methods**, streamlining decision-making processes by **30%**.

Amazon Sales Data Analysis | SQL, PostgreSQL, Power BI, Excel

- Built a comprehensive Amazon sales dashboard using Power BI and SQL for validation to analyze **sales trends**, identify **top-performing products**, and optimize **inventory levels**.
- Identified **32% year-over-year** sales increase in developing countries like India by analyzing historical data, highlighting the success of targeted marketing strategies.
- Analyzed sales data to identify the **5 most profitable** and **5 least profitable** products, enabling data-driven decisions leading to targeted strategies for improvement or discontinuation, boosting overall profitability by **15%**.

TECHNICAL SKILLS

Languages: SQL(PostgreSQL), Python, C/C++
Developer Tools: Visual Studio Code, Excel, Power BI, Github, Git
Libraries: pandas, NumPy, Matplotlib, Seaborn

POSITION OF RESPONSIBILITY

ASCE student club: Managed & handled the official **ASCE student club** social media pages like Instagram.
